Clifford H. McConnell

BUREAU OF PLANNING AND DEVELOPMENTAL RESEARCH  
F.S. Oldham, Director

## TABLE OF CONTENTS

	Page
CHAPTER I            INTRODUCTION Need for the study. Study objectives	1
CHAPTER II (a)      SUMMARY & CONCLUSIONS Major elements effecting pollution control. Underground pool diversion. Pollution control alternatives. Abatement treatment costs vs. economic justification.	4
CHAPTER II (b)      RECOMMENDATIONS Summary of recommendations. Suggested action. Basis for selection. General recommendations.	16
CHAPTER III          STUDY AREA DESCRIPTION Topography. Stratigraphy. Structural geology. Relevance to the deep mine drainage problem. Rainfall. Stream flow in the upper West Branch. Critical flow versus impoundment capacity.	26
CHAPTER IV          FINAL REPORT OBJECTIVES Types of overall planning to be considered. Main report objects. Sources of information and technologic support.	38
CHAPTER V            SAMPLING PROGRAMS AND METHODS MINE DRAINAGE SAMPLING Sampling points. Flow measurements. Chemical analysis. Data records.	41 41
STREAM SAMPLING Sampling points. Flow measurements. Chemical analysis. Data records. Conclusions.	42
CHAPTER VI          STREAM QUALITY EVALUATION Introduction. Summary. Characteristics of streamflow - headwaters area. Pre-breakout headwater stream quality. Effect of the breakout on stream quality. Stream analysis during study period (1971). Present in-stream loadings - Bakerton to Bower. Acid tributaries below the Curwensville dam. Acid slugging characteristic of the reach below Spangler. Importance of the slug effect.	44

CHAPTER VII	COAL MINE DRAINAGE SOURCES	Page 67
	Introduction. Summary. Basic data for drainage sources. Refuse pile sources. Deep mine sources. Strip mines. Diffuse sources of acidity below Spangler. Source of diffuse acidity. Mine water treatment plants. Deep mine alkaline discharges.	
CHAPTER VIII	THE DUMAN TREATMENT PLANT	93
	Background. Treatment plant facilities. Description of unit operations. Operating costs. Chemical performance of the Duman Plant. Effect of Duman Plant effluent on receiving waters. Water quality in Elk Creek. Recommended changes in operation. Conclusions.	
CHAPTER IX	THE DEEP MINE POOL COMPLEX	120
	Summary of deep pool study observations, deep mine pool complex. General description. 1971 operating history of Lancashire No. 15 pool. Pool level study. Pool flow study. Required pumping rate vs. Lancashire No. 15 pool level. Observations and conclusions.	
CHAPTER X	PROPOSED ABATEMENT PLANS	135
	Quick Start project list. Modification of unit operations at the duman plant. D-seam borehole diversion to Moss Creek watershed. Diversion of Sterling No. 7 discharge to deep mine pool system. Victor mine complex water treatment. Delta complex - Diversion of West Branch flow. Delta complex -combined mine water - sewage treatment facility. Suggested abatement procedures for refuse pile areas.

## LIST OF FIGURES

	Page
II-1 Schematic of Major Elements, West Branch of Susquehanna River from Headwaters to Curwensville Dam	5
II-2 Acid Loading Distribution in West Branch vs. Stream Flow Rates - Effect on Mine Water Treatment Plant Requirements	6
II-3 Water Use Benefits Associated with Mine Drainage Pollution Abatement in the West Branch Headwaters Area	14
III-1 Physiographic Provinces of Pennsylvania Showing Location of West Branch of Susquehanna River Watershed	28
III-2 Flow Pattern of the West Branch Headwaters	29
III-3 Bedrock Geologic Map of Portion of Watershed of West Branch Susquehanna River	30
III-4 Generalized Stratigraphic Section	32
III-5 Records of Maximum Flows at Bower Station West Branch Susquehanna River	35
III-6 Drainage Areas vs. Stream Points - Upper West Branch	36
III-7 Duration of Critical Flow Periods in Upper West Branch (1965-1970)	37
V-1 Weir Sizes for Various Flow Volumes	41
VI-1 Duration of Daily Flow of West Branch Susquehanna at Bower, Pennsylvania	47
VI-2 Stream Flow & Net Alkalinity Concentration for Sampling Stations above and below the Curwensville Reservoir June 16-September 30, 1970	50

## LIST OF FIGURES (CONTINUED)

	Page
VI- 3 Index to Stream Sample Location Maps	51
VI- 4 Stream Sample Location Map No. 1	52
VI- 5 Stream Sample Location Map No. 2	53
VI- 6 Stream Sample Location Map No. 3	54
VI- 7 Stream Sample Location Map No. 4	55
VI- 8 Watershed of West Branch of Susquehanna River with Relationship to the Pennsylvania Coal Fields	56
VI- 9 West Branch In-Stream Loadings - Bakerton to Bower	57
VI-10 Stream Flow and Acid Load in Stream - Bakerton to Bower	59
VI-11 Pollutant Loadings for West Branch Tributaries between Curwensville and Frenchville, Pennsylvania (October - November, 1971)	61
VI-12 Pollutant Loadings for West Branch Tributaries	62
VI-13 Acid Slugging Characteristic of the West Branch Reach below Spangler - 1971	64
VI-14 Acid Slugging Characteristic of the West Branch Reach below Spangler - June, 1972	65
VII- 1 Comparison of Pollution Load Sources West Branch Susquehanna River (June, 1971)	68
VII- 2 Pollutant Loadings Continuously Removed from West Branch by Barnes & Tucker Co. Mine Drainage Treatment Facilities (1971)	68
VII- 3 Major Refuse Piles in the West Branch Susquehanna Headwater Area	71
VII- 4 Color Photographs - Refuse Piles	72

LIST OF FIGURES (CONTINUED)

		Page
VII- 5	Pollution Load Produced by Refuse Piles on West Branch Susquehanna River (June, 1971)	73
VII- 6	Monthly Deep Mine Drainage Discharge Characteristics for Year 1971	74
VII- 7	Color Photographs - Acid Mine Water Drainage	75
VII- 8	Color Photographs - Alkaline Mine Water Drainage	76
VII- 9	Deep Mine Drainage Discharge Characteristics in Sub-Watershed Areas (Average Values for Year 1971)	77
VII-10	Pollutant Loadings from Breakout Sources - 1971	80
VII-11	Monthly Strip Mine Drainage Discharge Characteristics	81
VII-12	Strip Mine Drainage Discharge Characteristics in Sub-Watershed Areas	82
VII-13	Acid Sources and Pollution Load Generation in the West Branch Susquehanna Headwaters above Spangler, Pennsylvania (Data for the Period June, 1971)	84
VII-14	Acid-Alkali Material Balance in the West Branch Above Bower Station vs. Streamflow Rates (Data for Year 1971)	85
VII-15	Calculations of Potential West Branch Acid Slugging Effect from Refuse Erosion Deposits on Stream Banks and in Stream Bed	89
VII-16	Color Photographs - Acid Mine Water Lime Neutralization Treatment Plants	91
VII-17	Alkaline Drainage from D Seam Deep Mines	92
VIII- 1	Color Photographs - Breakout Areas and Emergency Set-up	95
VIII- 2	Color Photographs - Duman Treatment Plant Facilities	96
VIII- 3	Color Photographs - Sludge Removal Facilities	97

## LIST OF FIGURES (CONTINUED)

VIII- 4	West Branch - Related A.M.D. Treatment Plants Discharging into the Elk Creek Drainage Basin	100
VIII-5a	Lancashire No. 15 Mine - Duman Water Treatment Facilities	102
VIII-5b	Duman Water Treatment Facilities	103
VIII- 6	Pumping Flow Rate Duman Treatment Plant	104
VIII- 7	Influence on Duman Plant Effluent on Water Quality in Elk Creek and Lower Waters	109
VIII- 8	Effect of Duman Treatment Plant Effluent on Elk Creek	111
VIII- 9	Effect of Duman Plant on Elk Creek and Conemaugh Reservoir	112
VIII-10	Recommended Changes in Duman Plant Operations	117
VIII-11	Proposed Modifications to Duman Plant Settling Pond	118
IX- 1	Mine Pool Areas B-Seam 1972	124
IX- 2	Mine Pool Elevations	125
IX- 3	Inter-Relationship of Mine Discharge Flows and Lancashire No. 15 Pool Elevations	126
IX- 4	Compilation of Lancashire No. 15 Pool Water Production Rate versus Pool Level Elevation (For Period November, 1970 to December, 1971)	128
IX- 5	Duman Pumps Net Flow vs. Lancashire No. 15 Pool Level	129
IX- 6	Moss Creek (Pardee #61 - D Seam) Mine Water Discharge At Barnesboro Syncline Outcrop	131
IX- 7	Water Flows Related to Lancashire No. 15 Deep Mine Pool	132
IX- 8	Lancashire No. 15 Pool Storage Capacity	134

## LIST OF QUICK START PROJECT FIGURES

	Page
1. General Schematic for Modified Settling Pond Design	137
2. Discharge Borehole and Recreational Reservoir Locations for Deep Mine Pool Diversion to Moss Creek Watershed	139
3. Sterling No. 7 Discharge Diversion to Deep Mine Pool System	141
5&6. Proposed Diversion Facility to Delta Mine Complex	145
7. Index Map to Refuse Areas	153, 154
7-1. Lancashire Number 20	156
7-2. Sterling Number 6	158
7-3. Lancashire Number 14 and Sterling Number 1	160
7-4. Lancashire Number 15	162
7-5. Watkins	164
7-6. Susquehanna Number 1	166
7-7. Victor Number 10	168
7-8. Victor Number 9	170
7-9. Springfield Number 4	172
7-10. Lancashire Number 9	174
7-11. Moss Creek	176
7-12. Victor Number 17	178

## LIST OF PLATES

1. West Branch of the Susquehanna River Water Quality Sample Locations and Mine Drainage Affected Streams.
2. Mine Drainage Sample Locations Headwaters Area of the West Branch of Susquehanna River.
3. Deep Mine Workings in the Headwaters of the West Branch of the Susquehanna River B Seam Mining Area.
4. Deep Mine Workings in the Headwaters of the West Branch of the Susquehanna River D Seam Mining Area.
5. Deep Mine Workings in the Headwaters of the West Branch of the Susquehanna River D & B Seam Mining Area.
6. Deep Mine Workings in the Lower Kittanning (B) Seam situate in the Headwaters of the West Branch of the Susquehanna River.
7. Cross Sections Showing Deep Mine Workings South and West of the Spangler-Bakerton Area.
